## AUTOMATING INSPECTION AND COMPLIANCE MANAGEMENT

Enterprise Quality Manager™ (EQ/M) is a web-based solution that enables organizations to electronically manage inspection and compliance activities. You can schedule inspections and follow-up visits for a variety of premise types, take samples and monitor lab results, track non-compliances and corrective actions, assess fines and penalties, address customer requests, and issue permits/licenses/certificates.

*“Enterprise Quality Manager enables organizations to focus their limited resources on high-risk sites & activities.”*

The field inspection module can be used with handheld computers and mobile printers for immediate delivery of onsite reports. With the eServices option, you can offer online services such as online inspection results and ePayment of fees and fines.
