PRESS RELEASE

jadian CEO to speak at prestigious GITEX conference in Dubai *Will showcase Dubai Municipality's General Inspections & Fines Solution*

Lansing, August 29, 2007: The President and CEO of jadian enterprises, a leading software and services company focused on compliance and inspection solutions, has been invited to address attendees of the highly prestigious GITEX IT conference in Dubai, UAE. Mr. Jerry Norris will discuss the implementation of Dubai Municipality's risk-based "General Inspection and Fines Solution", based on jadian's software. The system is designed to automate inspection and compliance processes and improve the quality of services provided to constituents. The system enables the health department to focus on high-risk, poor performing establishments through more frequent inspections, thus better focusing its resources. Key discussion points will include the use of a risk based inspection model to allocate resources, using handheld computers for remote data collection, and integrations with other systems such as eGovernment. The talk will take place on September 11th from 11:15am – 11:30am in the Dubai Municipality exhibitor stand (No 805, Hall 8).

"GITEX is the most prestigious IT event in the region. Decision makers from large global companies located all around the world congregate at GITEX, which makes the event very fruitful for all of the vendors," said Mr. Norris, President and CEO of jadian enterprises. "In the past, we have had great success meeting new partners and resellers, generating new sales leads, and presenting our solutions to a large, important audience."

Dubai Municipality engages in a wide variety of health protection activities at over 93,000 different business establishments, including food inspections, swimming pool permitting, pest control, veterinarian licensing, the monitoring of health and medical clinics, and general environmental protection (air and water quality). Hand-in-hand with local partner Intertec Systems (Stand No A7-22 in Hall 7), jadian has configured its compliance and inspection software suite to address Dubai Municipality's needs. Dubai Municipality's 130 inspectors currently operate the bilingual software in a wireless environment using rugged handheld computers supplied by Intermec Technologies (Stand No B7-43 in Hall 7). Each inspector conducts an average of six inspections per day, which equates to almost 800 inspections per day or 175,000 annually. Companies found in violation are issued fines and ordered to correct the problems in order to ensure public health.

"One of the main goals of any compliance program is to ensure that all facilities are being inspected properly and are in compliance with the required regulations and laws," said Mr. Norris. "Being at GITEX provides the

opportunity to speak with companies from a variety of industries who may need automated compliance and inspection systems such as oil and gas companies, transportation authorities, construction companies, manufacturing and many others.”
